1. The following is an examiner's statement of reasons for allowance: The prior art fails to teach or suggest the instantly claimed polyether urethane. The claims require a mixture of a polyether urethane component with a specific degree of unsaturation and having two or more reactive silane groups and a polyether urethane component with a specific degree of unsaturation and having one reactive silane groups in specific weight percentages. In these two polyethers the reactive silane groups are attached to the polyether urethane by a reaction with different aminosilanes. Compare formula (I) and formula (II). The prior art is silent as to this specific mixture. WO 02/06367 teaches silylated polyether urethanes having from 50 to 95% of the NCO groups reacted with silane capping agents but this fails to show a combination of aminosilanes meeting formula (I) and (II). In addition, it is not clear from the fact that there are 50 to 5% unreacted NCO groups if this corresponds to a mixture of polyether urethanes having two or more silane groups and polyether urethanes having one silane group in amounts as claimed. Similarly, Emmerling et al., EP 372 561 and Stuart fail to adequately suggest the combination of aminosilanes of formula (I) and (II), in addition to the combination of polyether urethanes having one and two or more silane groups. These references are cited as being of general interest as teaching silane terminated polyether urethanes. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The Examiner notes that the only difference between these claims and those in the parent application (which was allowed but is now abandoned) is the phrase "less than" in the limitation for the degree of unsaturation.
